Search the Library Catalog and Databases in one Single Search!

You can limit to full-text articles only.

You can select one or more of these subject categories to search within.

Each subject category contains related databases in addition to the library catalog.

For this search example of Hurricane Katrina and FEMA, the subject category Current Events & News was selected. The databases selected for this subject category include: CQ Researcher, Custom Newspapers, InfoTrac OneFile, LexisNexis Academic, Library Catalog, MasterFILE Premier, National Newspaper Index, Opposing Viewpoints Resource Center, Proquest, and Regional Business News.
Here are the results of the search. You can click on the database name to get results from that specific database.

Click on InfoTrac® OneFile to get results 1-20.

The full-text is available for these results, and you can get to it by clicking “View” or “Full-text.”

Click on “Next Set” to retrieve the other results. For this example, #21-40.
Sometimes the full-text is not within WebFeat and you have to go to the native database or use Find it to get to the full-text.

<table>
<thead>
<tr>
<th>Record #8</th>
<th>When you click on “View” to get the full-text, you are sent to the native database, Academic Search Premier.</th>
</tr>
</thead>
</table>

Now click on Find it to see if the full-text is available in another database.
Another screen will pop-up. You can get to the full-text of this article through LexisNexis or Proquest by clicking “Go.”
